Suddenly,
there's a lot to
smile about.

The new Mystique® MB features an innovative, new mechanical base design.

The uniquely molded, dimpled base surface assures a consistently precise bond and allows worry free bracket removal when debonding.

The silica treated slot provides smooth, deeply recessed edges that substantially reduce abrasion between the arch wire and slot.

Molded of highly translucent ceramic, Mystique® MB brackets are virtually invisible.

Generously undercut tie wings dramatically improve ligation when compared to traditional ceramic brackets.

Torque in base design.

Color code ID for easy bracket identification.

Translucent is beautiful.

Mystique® MB has an optimal level of translucency and blends in perfectly with every shade of enamel. The aesthetics are further complemented by the revolutionary silica slot liner. In fact, from a distance of only one meter, Mystique MB is virtually invisible to the naked eye. When it comes to ceramic brackets, the choice is clear. Mystique MB.

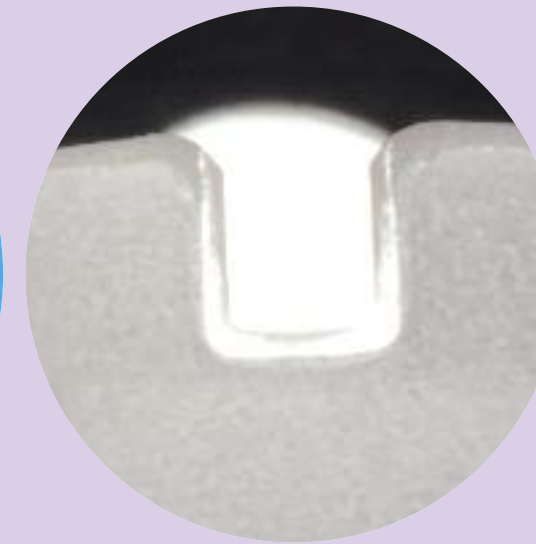

Unparalleled strength and durability.

Aesthetics are certainly an important aspect of ceramic brackets; the strength and durability of the brackets themselves is even more critical. Fortunately, Mystique MB delivers on all fronts. A thoroughly tested and proven second-generation mechanical lock base system ensures reliable bonding and debonding, while super heated glazing ensures overall structural integrity.

Debonding made easy.

With a mechanical lock and beveled edges, debonding with the new Mystique MB is a breeze. Just remove any excess flash, squeeze at the base/tooth interface to remove the bracket.

The Silica Slot difference.

While some ceramic brackets feature a metal slot liner, Mystique MB is different. A virtually invisible silica lining takes the place of unsightly metal slots and thus provides a more aesthetically pleasing bracket with optimal sliding mechanics. The silica slot lining process results in a true rectangular slot that has uncompromising torque.

It's their smile... and your reputation. Put your trust in Mystique MB.

By combining a revolutionary ceramic bracket with a proven mechanical base, Mystique MB delivers exceptional aesthetics and incomparable performance. For your patients, it means confidence in their smile; for you, it means confidence in your reputation.

The Perfect Complement to Mystique MB

High Aesthetic Arch Wire: A unique rhodium treatment provides a low-reflectivity surface, with a soft, frosted appearance. Available in both Sentalloy High Aesthetic and BioForce High Aesthetic, providing the same properties and excellent performance as the original Sentalloy and BioForce wires.

Sili-Ties™ are the perfect complement to Mystique MB. Impregnated with silicon to reduce friction, they also improve aesthetics and retain clarity longer.

Performance, precision and predictability – you'll get it all from the new Mystique MB. So no matter what the prescription, you can deliver brilliant results to your patients with confidence case after case.
