

The Ins and Outs of Self-Ligation

“How The New Interactive, Self-Ligating Bracket Can Impact Upon Your Practice Excellence and Efficiency”

**Friday,
January 29, 2010
Calgary, Alberta**

A Special Seminar by **Dr. Ron Roncone**

Founder of the JSOP[®] Program used by thousands of practitioners around the world

Learn the clinical benefits that an interactive self-ligating bracket system can provide for your patients and your practice, while gaining a new perspective on modern orthodontic technology vs. traditional techniques.

The Science of Innovation. The Art of Patient Care.

www.gacintl.com

About Dr. Roncone

After receiving his undergraduate degree from Marquette University, Dr. Roncone pursued graduate study in physiology and neuroanatomy at the Marquette School of Medicine while simultaneously earning his dental degree from the same university. His CV includes postdoctoral certificates from the Harvard School of Dental Medicine and the Forsyth Dental Center.

Dr. Roncone's practice in San Diego County, California, specializes in adult treatment (aesthetics, surgical and TMD) as well as "early" treatment for children. He is a respected and frequent lecturer, having taught more than 500 seminars around the globe. His impressive list of technical innovations include long (8-12 week) intervals between patient appointments, which he introduced in 1989 through the use of titanium wires, and the development of a unique prescription for bands and brackets. He is widely known in the orthodontic community as the "Guru of Marketing."

About the Course

This lecture will tell you everything you have wanted to know about self-ligation treatment as well as some things you may not want to know.

It will focus on the self-ligating series of brackets, appropriate wires, and sequencing tips and tricks for easier, quicker finishing.

The simplicity of the new invisible self-ligating system (for alignment of the anteriors) will be highlighted.

Lingual minor tooth movement is meant for relatively simple, cosmetic changes and it certainly offers much more control, no laboratory fees, and much shorter treatment times than clear aligners.

Practice management techniques will be shared on how you can run your practice **Just Short Of Perfect**.

www.ronconeroi.com

This course will help you look at orthodontics in a totally different manner than you have in the past. You will see the clinical benefits - for your patients and for your own practice efficiency - of using technology in helping you to achieve treatment results and a practice that is Just Short of Perfect- JSOP

"Dr. Roncone offers excellence in treatment and management areas. The systems he developed have made it possible to plan and achieve what is needed to make your practice the best it can be."

— Dr. Paul Karl

Topics to be Covered

- Is friction always bad?
- The real truth about Passive, Interactive and Active brackets.
- A comparison of various self-ligating brackets.
- Is there a "magic" bracket?
- Can any bracket make the difference between extraction and non-extraction?
- Can a bracket suspend the laws of biology?
- Can any self-ligating bracket work faster than the others?
- How important are wires to the process?
- Do we need "special" size or force wires?
- How does a self ligating bracket change your practice?
- Which brackets are easiest to use?
- Which brackets are most comfortable?
- The difference between the Biozone and the End zone.
- What does the literature say?
- Are multiple bracket prescriptions necessary?
- Can a case be finished?... Easily?
- What about retention?
- The areas in which orthodontists should change their mindset
- Lingual Minor Tooth Movement
- The JSOP philosophy and management system
- The 17 critical factors of an orthodontic practice
- The role of metrics in achieving JSOP

CASE STUDY

Initial Records

17 years old
Anterior open bite
Posterior crossbite

5 Months

Stage 1–Maxilla

Continue with original 018 Sentalloy

Stage 2–Mandible

Begin 020x020 BioForce

7 Months

Stage 2–Maxilla & Mandible

020x020 BioForce

14 Months

Stage 3–Maxilla

019x025 Resolve L Loop

Mandible

019x025 Resolve

16 Months

No surgery

No anterior elastics

17 year old anterior open bite

- Posterior crossbite right side
- Non extraction, no anterior elastics
- Non-surgical result
- Treatment time: 16 months
