

# In-Ovation® L<sup>MTM</sup>

the ideal approach for cosmetic correction

Jane: actual In-Ovation patient.

## *A breakthrough in cosmetic orthodontics...*

- Fast correction for minor anterior misalignments
- Absolutely undetectable appliances
- Extremely small and comfortable
- Fast, easy direct or indirect bonding
- No wire changes
- Attract patients seeking cosmetic correction of minor misalignments

# In-Ovation® L<sup>MTM</sup>

## A perfect solution for minor anterior misalignments

For so many patients the difference between an ordinary and a radiant smile can be measured in only a few millimeters. With the introduction of In-Ovation L<sup>MTM</sup>, achieving that smile can now also be measured in weeks instead of months or years.

### Quick cosmetic correction

A beautiful smile results from the aesthetic alignment of the six upper and six lower anterior teeth. In-Ovation L<sup>MTM</sup> turns these into a “dazzling dozen” using a system of “quick clips” – unprecedentedly tiny, self-ligating, lingual brackets that bond just below the incisal edge. Indirect placement allows the brackets to be positioned and bonded quickly; our In-Ovation self-ligating clips allow the wire to be seated and secured in seconds.

For cases requiring tooth movement of 6 mm or less, In-Ovation L<sup>MTM</sup> achieves results that compare favorably with those of the popular tray systems – but does so in approximately 12 to 24 weeks. That makes In-Ovation L<sup>MTM</sup> ideal for patients who desire fast results with a truly invisible appliance. With In-Ovation L<sup>MTM</sup> they can acquire a beautiful smile in no time!

For more information, call 800.645.5530.

### Benefits for the patient

- A very affordable alternative to other treatments
- A cosmetically perfect smile in just 12 to 24 weeks... instead of 12 to 24 months
- Absolutely undetectable treatment that builds confidence and avoids embarrassment
- Effortless compliance – requires no action on the part of the patient
- The lowest possible bracket profile for maximum comfort and minimal interference
- No concerns over plaque build up or periodontal impact due to the extremely short length of treatment

### Benefits for the practice

- Complete treatment for cases requiring minor tooth movement
- No wire changes in most cases
- Easy and fast placement of brackets with direct or optional indirect bonding
- Rapid wire engagement with self-ligating brackets
- No compliance issues
- A new revenue stream from patients who would not have considered orthodontics before In-Ovation L<sup>MTM</sup>

### Clinical indications

- Crowding of 6 mm or less
- Spacing of 3 mm or less/midline correction of 2 mm or less
- Canine rotation of 25° or less
